

Corporate Flight Management Names Custers as Chief Operations Officer

Smyrna, Tenn. — Sept. 30, 2010 — Corporate Flight Management today announced that its Board of Directors has appointed Leon Custers as Chief Operating Officer starting October 4, 2010. As COO, Custers will be responsible for guarding and improving the quality of the products delivered by CFM and for designing and implementing systems and procedures that provide the most efficient way of operating the different business units. Custers will manage both Fixed Base Operations, the Flight Operations, Aircraft Maintenance and IT Departments and will report directly to CFM's CEO Allen Howell.

Mr. Custers started his career at CFM as a line pilot in 1997 and became Chief Pilot 2 years later. In 2002 he took over the role as VP of Aircraft maintenance.

In that role he oversaw the transition of the Aircraft Maintenance department into a globally leading MRO for the BAe Jetstream and Cirrus Design Aircraft as well as the expansion of the corporate aircraft maintenance and aircraft accessory overhaul capabilities. During his 8 year tenure the department staff increased by 200%, revenues quadrupled and a successful move was made into new aircraft maintenance facilities.

"Leon is a great manager who will help position Corporate Flight Management for continued growth," said Howell. "Putting him in this role allows me to concentrate on the Marketing, Sales and Customer Relations aspects of running this organization."

"I have learned so much during my time in the Aircraft Maintenance Department and previously in the Flight Operations Department, and I've loved working with the people there," said Custers. "Together, with Allen and the great team at CFM, we'll be able to scale this company into a global leader in Aviation Services. I am thrilled to have this opportunity." Custers is a native of the Netherlands and came to the United States in 1987.
